Bcademy

Bcademy Network

Bcademy is the first international network devoted to in person training and consultancy in the cryptocurrency and blockchain based technology sector.

Bcademy Srl has been founded and financed only with cryptocurrency, in compliance with italian law (probably a world record for what concern this aspect) and since then we tried to be **the door between two worlds** that need to talk: the new technology with its disruptive power, and the industries as they are now set.

Bcademy

Knowing that knowledge and skills on cryptocurrency and blockchain based technologies will become a *condicio sine qua non* for individuals and companies who will want to grow in an increasingly digital market.

We built a real Academy on cryptocurrency and blockchain based technology to fill a gap: the need of an entity able to nourish individuals and companies with knowledges and skills. And we think that an in person teaching and consultancy is the best way to achieve this goal in the shortest time.

Bcademy

Bcademy Network is thus becoming a distributed place where citizens, companies and institutions can find validated informations on this field, to understand better and faster how to add value to their lives and business with this new technology.

Mirroring the paradigm change that the birth of Bitcoin has represented, we replicate our vision and mission inside a decentralized network, where Bcademy “central” has the role of support and harmonize the other “nodes” of the Network, supported by the **Advisory Board** and the **Scientific Committee**.

- **Advisory Board [AB]** Formed by managers and entrepreneurs with experience on financial and international markets. Their role is to support the choices and the development of Bcademy.

- **Scientific Committee [SC]** It’s formed by globally recognized experts, its role is to check from an ethical and a technical point of view Bcademy products and services. The committee is now composed by two experts from each field: technical, economics and tax and law.

Bcademy

Bcademy's Scientific Committee is designed to grant the **scientific and ethical quality of products and services of the entire Bcademy Network**, thus maintaining in theory and in practice a high brand perception at a global level.

It will be called to action **when nodes build new products and services**. It will also be called to action if there are any relational problems with stakeholders, competitors or other market players, whether institutional or press related.

Bcademy

Bcademy Network is **the first global network for training and consultancy on the cryptocurrencies and blockchain based technologies**.

Every “node” is an independent partner, a company linked by a membership agreement, supported in its development by Bcademy staff, the Bcademy Advisory Board and the Scientific Committee.

Before signing the **membership agreement**, an initial period of 24 months is regulated by a soft agreement to know each other and by then define the true agreement on the needs of a node.

Bcademy

With our partners, we are developing the network with these characteristics:

- Milano (I) [founded 14 jan 2019]: blockchain, financial services, industry
- London (UK): financial services, tax&law
- Zurich (CH): exchange, token listing, financial services
- Barcelona (E): programming
- La Valletta (M): trading, VC
- Panama City (PAN): financial services, logistics, industry
- Warszawa (PL): programming

Bcademy Ecosystem

Bcademy is backed by various investors and managers, and is guided by a board with entrepreneurial experience, which represent the pillars of Bcademy, available to facilitate the creation and development of the network, supporting each node with a referent:

- **Guido Pascotto**, financial sector, joint participation in public and private tenders, strategic clients management;
- **Lia Correzzola**, harmonization of marketing and communication and shared strategies implementation;
- **Alessio Salvetti**, development sharing and of training and consultancy products and services, with particular reference to a targeted support in the business development of each node.

Bcademy

Other players inside our ecosystem are:

BHB Network: nurtures the strongest community of experts providing enterprises with the skills to understand and use bitcoin and blockchain technology.

inbitcoin: an innovative company that develops professional projects, products and services for the use of bitcoin and blockchain technology.

Bcademy

Coinlex: through meetings, discussion, training, advice and assistance, aims to indicate the route in the legal and tax field regarding cryptocurrencies.

COINLEX.
Bitcoin, criptovalute e blockchain.

Satoshi Design, marketing and communication.

SATOSHI DESIGN

Bmanity, owner of the brand **Comproeuro**, selling bitcoin.

KOMPRO EURO

Some of our Projects

Bcademy and partners are now engaged in a few projects, some of which are covered by NDA, but some can be told here:

Mitgate ONE POS

https://www.mitgate.it/

Mitgate ONE POS is an innovative payment service whose aim is to grant from its genesis a very large number of transactions between private and businesses without any commission and with a cashback to facilitate its propagation. Based on the integration between blockchain technology and traditional payment channels, Mitgate ONE POS anticipates, thanks to the blockchain technology, the bank disintermediation functions that are allowed by the application of the PSD2 Directive once effective.

Eidoo

https://eidoo.io/

The Eidoo project (carried on by Poseidon group) represent an effort to create an effective “blockchain to human inteface”, simplifying the interaction between users and blockchain-based assets, creating a set of products and services providing a new intuitive, easy and safe user experience to store, buy, sell, transfer and exchange blockchain-based digital assets.

Sanus Coin

https://sanuscoin.com/

Sanus COIN (carried on by inbitcoin) is a token over Bitcoin blockchain created to allow the issuer to expand its network, enhance its assets and use the token to make payments between the network.

Bcademy

Nowadays there are many **blockchain based projects** ongoing on the globe, fighting between each other to establish the standard upon which all applications will be built.

In **logistics** (shipping process with Maersk, inventory tracking) and **supply chain management** (invoicing and payments, dispute settlement), in **banking** (Ripple, nearly 80% of major financial institutions currently experimenting with blockchain across areas as diverse as payments, anti-money laundering, CRM and syndicated loans), all kind of **financial services**, **real estate**, automotive, food industry etc., companies are exploring the advantages of decentralized and distributed ledger, looking for the delicate equilibrium between economics, efficiency, compliance, control and privacy that will represent the standard after the Bitcoin revolution.
